Hi Shannon,

In your 2/16/18 e:mail response, you indicated that Veolia can take the probe in as a mercury compound material due to the nature it was used for. What they are proposing to send you is the white plastic vial in picture above that has a white sensor strip inside closed vial. Second picture is just using a pen next to vial to show small size. So that small white sensor strip inside closed vial is all there is to the "probe".

So can they collect all the white plastic vials in a drum and we can profile the drum as a mercury compound material and ship to Veolia that way? They are getting ready to generate a lot of these and need to know if they need to empty out the contents of the vial or if they can collect vials in drum and send "as is".

Thanks,
Ann

Hello Ann,

Here are two pictures of the sampling vial. In the first you can see the white sensor strip inside. In the second photo I propped up a pen just to give a sense of scale. Let me know if you need anything else.

Sincerely,
Sandy
